

# SPECTRAQUARTZ® Colored Quartz

for floors, walls, decks & concrete

SpectraQuartz is high-purity quartz that is permanently pigmented in an amazing array of distinctive colors, allowing you to transform ordinary floors and walls into inviting living and working spaces. It's the simple and elegant way to make a statement of style and quality!

## Distinctive color, texture, and durability

**Beauty.** SpectraQuartz colors range from the subtlest tints to the brightest hues, adding visual interest and excitement to any environment. You're limited only by your imagination!

**Strength and durability.** Quartz is one of the hardest natural substances in the world, with great structural strength, durability, and resistance to abrasion and impact. SpectraQuartz also gives your floors added texture and slip resistance.

**UV and chemical resistance.** SpectraQuartz is UV, chemical, and acid resistant, and will retain its beauty and functionality for years. The SpectraQuartz thermal bonding process permanently binds the pigment to the quartz grain surface, ensuring that colors won't bleed or fade.

**A wide range of colors and blends.** Choose the perfect color or blend for your commercial or residential project. No other colored quartz product gives you so much freedom to create a uniquely special environment.

**Environmentally friendly.** SpectraQuartz is produced with an environmentally friendly pigment dispersion technology. SpectraQuartz contains no harsh solvents and is compatible with most resins used to coat floors and walls.
